

iO-FCA

Specification Sheet Filter Alert

To notify your filter change needs

The iO-FCA Filter Alert is designed to provide an audible and visible warning when your HVAC filter gets dirty. This easy-to-install device can signal that the filter needs to be replaced in order to maintain design airflow, static pressure, and air quality.

As the filter gets dirty, the efficiency drops off, and the HVAC system static pressure increases. The iO-FCA Filter Alert equipped on a static pressure switch monitors the increase in pressure and alerts the end-user to change their filter when necessary.

OPERATION:

Input Voltage: 24VAC

COMPONENTS:

Printed Circuit Board, Static Pressure Switch, Pneumatic Probes and Tubes

WARRANTY:

1 Year
