

CIRCULAR VAV DIFFUSER

The VDR-XX Circular VAV Diffuser is used to vary the supply air volume in a ventilation system. It can be controlled using a proprietary wall-mounted thermostat that comes as part of the Z-2000 system or as a standalone component in other applications.

Features and Benefits:

- Used to vary the supply air volume from a proprietary wall-mounted thermostat
- Can be used with the Z-2000 system or in standalone applications
- When more than one diffuser is required for a single zone, the round auxiliary diffuser can be paralleled to a VAV diffuser
- Available in 6", 8", and 10" sizes
- All steel construction and includes factory mounted actuator with discharge air sensor and PC board
- Aluminum and custom paint options available
